

Daniel Franco Fajardo

Principal Systems Architect — Technical Authority for Critical & Intelligent Infrastructure

Mexico — Open to national and international opportunities

Remote / Hybrid / Selected On-site Collaboration

relativomec@gmail.com — [GitHub](#) — [GitHub Pages](#) — [LinkedIn](#)

Summary

Principal-level Systems Architect and Product Design Authority-linked professional with 9+ years across transportation, tolling, automation, and critical operational systems. Strong background in architecture direction, technical governance, PLC/edge/backend integration, validation, bid support, and operational reliability. Combines implementation depth, authority-oriented judgment, and applied AI as an enabling capability within governed systems.

Core Strengths

- Systems Architecture & Technical Governance
- Critical Infrastructure & Safety-Critical Environments
- Integration, Validation & Operational Reliability
- Applied AI / Data / Automation as Enabling Capability

Experience Highlights

Hitachi Rail GTS México / RCS México — Product Design Authority / Architecture / Product-Line Scope

- Defined software and hardware architecture directions for new-technology integration.
- Supported bids through technical documentation, compliance framing, annex interpretation, and solution viability analysis.
- Coordinated technical direction across suppliers, engineering teams, and operational constraints.

Thales / RCS engineering continuity — Transportation / Tolling / Integration

- Worked across C++/Python platforms, PLCs, field devices, interfaces, and validation-oriented tolling environments.
- Reinforced FAT/SAT discipline and integration quality in operational systems.
- Improved logic, confirmation, and recovery behavior in constrained critical subsystems.

Independent Systems Architect / Applied AI / R&D

- Built local-first and resilient public proof-of-work demonstrating traceability, bounded analytics, and disciplined technical communication.
- Uses applied AI as a governed enabling capability within architecture-led prototypes.

Key Achievements

- Product Design Authority-linked scope in mission-critical systems
- International technical coordination across France, Italy, and Mexico
- Approx. 25% vehicle-classification effectiveness improvement
- Validation-lab standardization and stronger engineering/test readiness
- Bid support through documentation, compliance matrices, and annex interpretation

Education

M.Sc. in Artificial Intelligence — officially graduated; final administrative degree process in progress
Mechatronics Engineering

Strengths Line

Architecture • Technical Authority • Critical Infrastructure • PLC/Edge/Software Integration • Validation • Applied
AI under Operational Constraints
